EDUCATION

California State University, Fullerton

Expected December 2026

B.S. in Computer Science, Minor in Math

Overall GPA: 3.60

Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence, Probability Theory, Statistics, Linear Algebra

TECHNOLOGIES

AI & Automation: Microsoft Copilot Studio, AI Agents, Power Automate, Claude Code, Codex REST APIs, J

ITSM & Support Tools: Jira, Freshservice, Postman, Git, GitHub

Languages: Python, C++, Java, JavaScript, SQL, Swift, HTML, CSS

Frameworks & Libraries: FastAPI, React, Node.js, Express.js, Tailwind CSS, PyTorch, Scikit-learn, XGBoost, Pandas, NumPy

Platforms: Databricks, Firebase

EXPERIENCE

Flexera

May 2026 - August 2026

Data Analytics Intern

Itasca, IL

- Designed and deployed an **AI-powered IT support assistant** in **Microsoft Copilot Studio**, enabling natural-language incident diagnosis, ticket triage, filtering, and root-cause analysis across **Jira** and **Freshservice** data sources.
- Integrated **Jira** sprint and scrum workflows to support issue tracking, status-based filtering, assignee workload analysis, and recurring-incident detection across active support queues.
- Built **Power Automate** workflows and **REST API** integrations to retrieve, transform, and aggregate cross-platform ticket data, reducing manual investigation effort and accelerating troubleshooting workflows.
- Engineered automated pagination, dynamic query generation, and **JSON-based data pipelines** to reliably process large-scale enterprise datasets exceeding 300 tickets per query.
- Developed AI-assisted aggregation pipelines for ticket volume analysis, status distribution, assignee workload monitoring, and **SLA reporting**, improving response time, operational visibility, and stakeholder decision-making.
- Implemented anti-hallucination guardrails, response validation logic, and retrieval controls to improve AI reliability and ensure accurate ticket insights for internal users.
- Showcased the AI-powered support agent to senior leadership, explaining system architecture, data integrations, performance optimizations, and operational benefits while addressing technical and business questions.

PROJECTS

Game Outcome Prediction Platform

June 2025 - August 2025

- Built and deployed a multi-class **XGBoost** system predicting player outcomes at **90% accuracy** (win/loss) and **50%** (8-class placement).
- Designed a **data pipeline** on the Riot Games API to collect, clean, and aggregate large-scale match stats, applying cross-validation and feature engineering for robustness.

Real-Time Multiplayer Game with Firebase Integration

August 2024 - September 2024

- Built a real-time 2D web app supporting concurrent players with synchronized state via **Firebase** cloud services.
